

DENSITY

really cool presentation

**ok so why do some
materials float and
not the others???**

The image features a light gray background with a decorative border of colorful, abstract shapes. At the top, there are orange starburst-like shapes, purple wavy lines, orange wavy lines, and a pink flower-like shape. On the left side, there are orange and yellow striped vertical shapes and a pink flower-like shape. On the right side, there is an orange heart-like shape and a green starburst-like shape. At the bottom, there are orange wavy lines, blue wavy lines, and a green starburst-like shape.

quick recall

what is density?

**so can density tell us
something about the
material itself?**

predict!

which is denser?

**big wood
block**

**smol
metal
block**

EXPERIMENT TIME
(like online but still)

**will the density change
if i accidentally break
this pencil?**

question!!

cube A: 100g

cube B: 300g

**both are the same size,
which is more dense?**

**lets split
into groups**

2 groups → 7 ppl
2 groups → 6 ppl

mystery material

weight = 54g

volume = 20cm³

whats its density?

**don't say the answer outloud,
discuss it among your group**

**which material could
this thing be?**

wood: 0.6g/cm^3

aluminum: 2.7g/cm^3

iron: 7.9g/cm^3

Final group question
(ur going to read ur
answers after for everyone)

thank you
